

FALL PLUMBING

Maintenance Checklist

Nine simple steps to help protect your home before winter.

1

DISCONNECT & STORE HOSES

Remove garden hoses, drain them, and store them indoors.

2

INSPECT OUTDOOR FAUCETS

Check hose bibs for leaks, cracks, or visible damage.

3

TEST YOUR WATER HEATER

Look for leaks, unusual noises, and reduced performance.

4

CHECK FOR PLUMBING LEAKS

Inspect under sinks, around toilets, and near appliances.

5

TEST THE MAIN SHUTOFF VALVE

Make sure it turns easily and is accessible in an emergency.

6

CLEAN SLOW DRAINS

Remove hair and buildup before holiday plumbing demand increases.

7

INSPECT EXPOSED PIPES

Check for corrosion, moisture, and damaged or missing insulation.

8

TEST YOUR WATER PRESSURE

Watch for pressure that is too high, low, or inconsistent.

9

SCHEDULE AN INSPECTION

Have small problems checked before freezing weather arrives.
